

PADDOCK VAC £2995 inc vat

The Paddock Vac was the first paddock grooming machine, and its success has spawned the entire range, including the larger Maxi Vac for the biggest properties to the Yard Vac, perfect for small holdings and even large homes. Originally designed to clean up after horses and alpacas, imaginative users have found a multitude of further uses for this machine, from cleaning to harvesting fruits and nuts. Due to their versatility and ruggedness the building industry has recently pounced on them to keep building sites clean with a minimum of fuss.

Built from tough "A" grade Polyethylene on a sturdy, powder coated steel frame, the Paddock Vac is designed to be towed behind most quad bikes or ride on mowers, and will handle a wide range of debris, wet or dry, such as manure, wood shavings etc. The 3.2m length of the 127mm diameter UV protected hose and nozzle, and ergonomic nozzle handles, allow the unit to be used from the towing vehicle if required.

The pivoted frame allows the 400 litre (approx. 3-4 wheelbarrows), storage compartment to be tipped up and emptied whilst the unit is still attached to the vehicle. Fittings are made of marine grade stainless steel. Comes with a top of the range Honda 4 stroke engine

The Paddock Vac was designed and is constructed locally in Australia, resulting in a tough, durable machine able to take on the toughest jobs with ease.

MAXI VAC £3995 inc vat

The Maxi Vac is the largest paddock vacuum in the range. At an 800 Litre (approx. 4-5 wheelbarrow) storage capacity, it is designed to be towed by most quad bikes or ride on mowers, and retains all the features of its smaller brother, the Paddock Vac- "A" grade Polyethylene body, 127mm collection nozzle on a longer 3.7m UV protected and reinforced hose/nozzle assembly.

Top of the range Honda 4 stroke engine with 500mm SupaFlo filtration system to maximize suction in dusty areas, all built on a larger commercial grade powder coated steel frame with Greystone all weather tyres to carry the extra load this machine is capable of handling.

Capable of collecting a wide range of material - manure, sawdust, wood shavings, leaves and rubbish around your property, in any conditions, wet or dry. The larger storage capacity means less emptying on those larger farm maintenance jobs. The machine is also used for collecting walnuts, chestnuts, acorns or macadamia nuts at harvest time, even golf balls around the driving range. It will take the effort out of those clean up jobs and save you time and money.
